Boston, MA | 646-961-2475 | deep.patel.0603@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

EDUCATION

Boston University

Master of Science in Data Science

Expected May 2027

Relevant coursework: Data Engineering at Scale, Machine Learning for Business Analytics, AI Ethics, and Tools in Data Science

CUNY Queens College

Bachelor of Arts in Computer Science

Dec 2024

Relevant coursework: Data Structures, Database Systems, Object-Oriented Programming, Computer Architecture, Software Engineering, Operating System, and Advanced Python

SKILLS

Languages: Python, Java, JavaScript, TypeScript, C++

Frameworks & Libraries: Spring Boot, Node.js, Express, React

DevOps & Tools: Git, GitHub Actions, Docker, Postman, CI/CD, Linux, AWS

Databases: PostgreSQL, MongoDB, Firebase, SQL

Practices: Agile, REST APIs, Test Automation, Simulation Tools, Code Reviews

EXPERIENCE

Prama

Remote

Software Engineering

Jan 2025 – Aug 2025

- Engineered REST APIs with Spring Boot to support role-based access control, strengthening backend modularity and security.
- Integrated AWS EC2 automation via Docker and backend scripts, cutting manual infrastructure work by 40%.
- Optimized MongoDB and PostgreSQL queries through indexing and caching, enhancing performance and response time.
- Diagnosed and resolved API issues using Postman and logging tools, increasing reliability under scaling.

Tech Incubator

Queens, New York

Software Engineering Intern

Feb 2024 – Apr 2024

- Built full-stack features for a travel planning app using Node.js and React, including destination search and booking modules.
- Refactored backend routes and API integrations for improved performance and maintainability.
- Collaborated with clients to translate business goals into Wix-based web solutions, optimizing site structure and user flow.

Evergreen Investments

Remote

Implementation Specialist Intern (Web Developer Intern)

Jul 2023 – Aug 2023

- Automated order processing via a centralized SQL database, reducing manual data entry by 80% and errors by 60%.
- Refactored legacy JavaScript logic and coordinated Git-based workflows with intern teams using GitHub and VS Code.
- Deployed backend scripts on Linux-based servers and helped coordinate test deployments during weekly sprint cycles.

PROJECTS

Credit Risk Prediction & Decisioning System | Python, SQL, PostgreSQL, scikit-learn, Git, GitHub

- Constructed an end-to-end credit risk pipeline by cleaning HMDA loan data and persisting features, predictions, and decisions in PostgreSQL, enabling full visibility into each application's lifecycle.
- Enhanced prediction reliability by calibrating a logistic regression model with Platt scaling and measuring performance using ROC AUC, Brier Score, and calibration curves.
- Formalized approve, review, and reject decision rules based on model risk scores, producing consistent and explainable underwriting outcomes.

Grant Cancellation Impact Analysis (Team Project) | Python, SQL, Pandas, NumPy, APIs, Data Visualization, Streamlit

- Designed a forensic analytics framework as part of a cross-functional team delivering results to a U.S. Senator's office, examining 133K+ federal grant transactions.
- Uncovered disproportionate equity impacts by linking grant data with ACS Census demographics, showing that high-diversity communities absorbed up to 175× higher per-capita funding cuts.

SecurePetStore API | SpringBoot, Spring Security, REST API, Postman, JWT Token and MySQL | [GitHub](#)

- Designed secure, role-based REST APIs for user and admin accounts, integrating JWT for session control.
- Maintained clear code structure and logging to trace issues across the service layers.

ZzzPredict | Python, CSV file, Streamlit | [GitHub](#) | [Streamlit](#)

- Created a real-time ML-based app that predicts sleep quality using health metrics, deployed with Streamlit.
- Processed and cleaned input data with Pandas, implemented error handling, and enhanced component testability.
- Shared usage documentation and participated in peer feedback cycles to improve app usability.
